

## NAFTC Prepares Manual for New Miles Electric Vehicle

The **National Alternative Fuels Training Consortium [NAFTC]** has entered into an agreement to develop service materials and training for the **Miles Automotive Group**. Miles Automotive, with offices in Malibu, California; New York City; and Hong Kong and Shanghai, China, is preparing to market an all-new electric drive, zero-emissions NEV in the United States.

Years of research, design, and testing have enabled Miles Automotive Group to offer fleet managers the first NEV with the comfort, safety, and convenience features of a conventional passenger vehicle. Miles Automotive Group is ready to provide zero-emissions electric vehicles for North America's urban fleets.

David Hirsch, CEO of Miles Automotive, has retained the NAFTC to enhance the current English translation of the service and owner's manual. Miles Automotive is also working with the NAFTC for the development of an advanced troubleshooting and diagnostic manual, a basic time guide for allowable repair times, a pre-delivery checklist, and the development and delivery of a three-day new product information course for service technicians.

"All of us in the Miles Group are very pleased and excited to have obtained the service and expertise of the NAFTC," said Hirsch. "The development of these materials by the NAFTC will help ensure the owners and operators of our cars enjoy a truly seamless transition into an electric, zero-emission vehicle."
